METHOD AND SYSTEM FOR AUTOMATIC  
SELECTION OF A TEST SYSTEM IN A NETWORK ENVIRONMENT

ABSTRACT OF THE DISCLOSURE

A method of selecting a test system in a distributed network environment includes determining, at a management server, a target test system description, the target test system description associated with a software test and comparing, at the management server, the target test system description to a test system descriptions list. The method further includes selecting a test system description from the test system descriptions list that matches the target test system description, and contacting a selected test system, the selected test system associated with the selected test system description. Computer program product and systems using the method are also provided.
